

Casting resin bowl

Instructions No. 3065

Difficulty: Advanced

Working time: 20 Minutes

You can cast this beautiful casting resin bowl in two versions: plain or marbled! There are a few things to consider when working with casting resin, but with these instructions you can mould your bowl in about 20 minutes. Of course, you can give free rein to your creativity when choosing the colour and cast great shapes - you can also find a large selection of other casting moulds in our VBS online shop.

Protect your workplace with a handicraft mat.

Always put on disposable gloves before working with casting resin. Use an old plastic container for mixing, which you can throw away afterwards (e.g. old yoghurt pot etc.).

Measure out 75 ml of resin and 75 ml of hardener per bowl using the small cups in the packaging. Use the spatula provided to thoroughly remove the mixture into your mixing cup each time. You should end up with 150 ml of casting resin for the casting moulds. Mix the mixture thoroughly until it is cloudy.

Then add a small dab of tinting colour. Stir again thoroughly.

Then pour the mixture into the casting mould. Then blow-dry it with the embossing dryer until all the bubbles have been removed and the mixture looks crystal clear.

Leave to dry for at least 24 hours.

Crystal-Casting resin, 300 ml
